

EXPRESSION OF CONCERN

Anticancer effects of juglone in OVCAR-3 human ovarian carcinoma are facilitated through programmed cell death, endogenous ROS production, inhibition of cell migration and invasion and cell cycle arrest

Jun-Yu Shi, Zhe-Ren Huang, Hong-Yan Gao, Xiao-Li Xu

Department of Gynecology, the third Affiliated Hospital of Suzhou University (Changzhou First People's Hospital), Changzhou, Jiangsu Province, China, 213003.

Expression of concern to:

JBUON 2020;25(2):779-784; PMID: 32521867

Following the publication of this article [1], readers drew to our attention that part of the data was possibly unreliable. We sent emails to the authors with a request to provide the raw data to prove the originality, but received no reply. Therefore, as we continue to work through the issues raised, we advise readers to interpret the information presented in the article with due caution. We thank the readers for bringing this matter to our attention. We apologize for any inconvenience it may cause.
